

Course: BTech

Semester: 5

**Prerequisite:** Data structures, Fundamental of programming

**Course Objective:** Analyze the asymptotic performance of algorithms. Write rigorous correctness proofs for algorithms. Demonstrate a familiarity with major algorithms and data structures. Apply important algorithmic design paradigms and methods of analysis. Synthesize efficient algorithms in common engineering design situations.

**Course Outcome**

**After Learning the Course the students shall be able to:**

Course Outcome: After learning the course the students will be able to:

1. Develop the ability to analyze the running time of any given algorithm using asymptotic analysis and prove the correctness of basic algorithms.
2. Design efficient algorithms for computational problems, using various algorithm design techniques taught in the course.
3. Explain the major graph algorithms and their analyses. Employ graphs to model engineering problems, when appropriate.
4. Analyze String matching algorithms.
5. Explain the complexity classes P, NP, and NP-Complete, and demonstrate the NP-Completeness of a specific problems.

**Miscellaneous**

**Exam Requirement**

It consists of Assignments/Seminars/Presentations/Quizzes/Surprise Tests (Summative/MCQ) etc
