

Assignment-4

ASSIGNMENT

Unit 4: Basics of R

ASSIGNMENT

1. Explain basic data types and objects in R with examples.
2. Discuss different control structures used in R programming.
3. Explain the concept of Feature Engineering in R.
4. Differentiate between Label Encoding and One Hot Encoding.
5. Explain scaling and dimensionality reduction techniques in R.

Unit 5: Model Fitting in R

ASSIGNMENT

1. Explain Linear Regression and Logistic Regression models with examples.
2. Discuss Decision Tree Classification algorithm in detail.
3. Explain Naïve Bayes Classifier and its advantages.
4. Compare SVM and Random Forest classification techniques.
5. Explain K-Means and Hierarchical Clustering methods with suitable examples.
- 6.
